

Position: Software Tester/QA (Test Engineer)

Location: Skopje, Macedonia.

Salary: Unspecified

Company: METUS DOOEL Skopje

Job Type: Permanent, with an initial 6months agreement (trial and training period)

#### Job description

A software tester must have understanding of computer environment (OS, Network, File Share, etc). Must also possess a strong interest in technology and its advancement. In this role, specifically, the tester will not only test new features and functionality, but must also actively use every function and tool of the software solution in order to develop a deep understanding of the product and how it works. Constant use of the application will also allow for proactive identification of bugs, performance and reliability issues, as well as other potential failures. Detailed metrics are recorded and monitored to track the progress and outcomes of the testing process. Oral communication skills are key as the tester must be able to effectively communicate with other members of their team as well as their clients. In order to accomplish this they must be able to communicate using both technical and non- technical "layman's" terms alike depending on the audience they are addressing. Written communication and documentation skills are also essential. As a key member of the product development team in this company, it is essential that the candidate be able to accurately document test procedures and results to allow for continuous process improvement and to institutionalize the knowledgebase.

As a Software Tester will be responsible for all aspects of software testing. Working within the development team, you will:

- Evaluate and tests new or modified software programs and software development procedures used to verify that programs function according to user requirements and conform to established guidelines.
- Participate in feature development from concept to design to construction in order to drive quality into not only the software application, but also the culture of the organization
- Plan, design, and author effective test cases
- Write, revise, and verify quality standards and test procedures for program design, product evaluation and quality assurance
- Observes computer monitoring/performance metrics during program test to detect error codes or interruption of program and corrects errors.
- Writes documentation to describe program evaluation, testing, and correction.
- Update User and Admin Manuals per changes.

**Required education, skills and experience:**

- 1 year of Software Testing will be considered as advantage
- Degree in Computer Science or a related field is preferred
- Experience with reviewing requirements and developing test cases based on those requirements
- Strong written and verbal communication skills are a must.
- Must be able to multitask and meet deadlines in a fast-paced start-up environment
- Attention to detail and strong problem-solving skills are critical
- The ability to work as a team player is essential
- Initiative and the ability to work with minimal guidance
- Knowledge and experience of multimedia software will be considered as advantage
