WebRTC's Project - Developer

Inovatika DOO is looking for a senior full-stack developer with strong experience in WebRTC and WebSocket technologies (SignalR, socket.io, XSockets etc), that will work on project where he/she will take full responsibility of developing APIs and services that will enable peer to peer or group communication; utilize audio, video, and data channels; implement web front-ends; and leverage media engines for mixing, conferencing, sharing, and more.
.
Desired skills and expertise:

- **WebRTC**. Previous experience with is a prerequisite. Sending us portfolio of WebRTC projects you worked is preferable.
- **Web Sockets**. Strong experience with Web Socket frameworks is a must. We are using them for signaling.
- **Own your work**. You have demonstrated ability to take a problem all the way to implementation, and take pride in what you do. You recognize that your work is a reflection of you.
- **Initiative**. You have a track record of not waiting on being told what to do, but rather seeking out how you can help and improve things you touch. A plan, not an excuse.
- **JavaScript**. We want to provide web APIs for the front-end developer. Experience with KnockoutJS is preferable.
- **.NET or Node.JS**. Our preferred services language is C#, so demonstrated expertise with core C#, .NET frameworks, Node.JS frameworks, Express.JS, and application of design patterns
- **API design**. Maybe on a library, maybe on a web service.
- Mastery of more makes you versatile and valuable.
- Part time/Full time Work from home.

The project's budget is specified. Full description of the project, upon request.
