

1.	<b>Course title</b>	Business modeling
2.	<b>Course code</b>	CC-I-04
3.	<b>Semester</b>	9
4.	<b>Unit offering the course</b>	Faculty of Computer Science and Engineering
5.	<b>ECTS</b>	6
6.	<b>Goals of the study programme</b>	
	<ul style="list-style-type: none"><li>• This course is motivated by the belief that it is better to create the right product than to create the product exactly. The basics for achieving this are twofold:<ul style="list-style-type: none"><li>• to be able to model and analyze business facts and processes and</li><li>• to adapt business models to the needs.</li></ul></li><li>• The course will apply the specifics of UML and introduce new properties, such as example, Contract Diagram. The conversion is performed with development of Gap-Navigator, which is a term based on software refinement. The course will consider a variety of business models, including B2C (Business to Customer), B2B (Business to Business),...</li><li>• Real examples of small and will be shown and reviewed throughout the course SME - small and medium sized enterprises</li></ul> <b>Competencies</b> Upon successful completion of this course, the student will be able to: <ul style="list-style-type: none"><li>• models things and business processes using UML;</li><li>• approaches modern business practices and lays the groundwork for improvement of processes;</li><li>• creates models that accurately represent the nature of businesses;</li><li>• establishes business templates to solve the most common problems;</li><li>• structures the models in order to maximize the organizational contribution;</li><li>• transforms the business model into a needs model</li></ul>	
7.	<b>Contents of the study programme</b>
