

Java Back-End developer:

Job description

As a Java Backend Developer, you'll work closely with experienced developers and have a chance to bootstrap projects, scale, migrate and maintain existing ones. As a company, we strive to follow industry trends and always be on top of technology.

We expect you to be highly professional, solution-oriented with a focus on the client's business needs and be open to mentor new hires and junior developers.

Qualifications:

Minimum 3 years work experience in the field

Excellent understanding of the OOP paradigm and principles

Excellent knowledge of the Java language, JVM and related build tools

Excellent reading and written English, and can with no problem communicate with an English speaker

Is ambitious and hard-working, and has a very determined and curious attitude

Has logical mindset and enjoys solving problems

Cares about the products he's working on and has a strong delivery attitude to the clients

Advanced knowledge and experience working in SpringBoot

Several years of professional experience in Agile software development

Solid experience and knowledge of Unit Testing

Other Optional Qualifications:

Experience with or willing to learn Kotlin

Has a BSc/MSc Degree in Computer Science

Experience working with Docker

Experience with Microservices and Cloud Computing

Good understanding of Kubernetes or other orchestration tools
